

## **SERVICE BULLETIN NO. 8**

### **1998 Dodge 2500, 3500 4 X 4 Trucks** (With AHD Snowplow Preparation Package) **Frame Attachment Kit No. 81015**

### **New Steering Box**

- A. Dodge has made a running change to the steering box on their 1998 model year 2500 & 3500 4 x 4 trucks. A stiffening web on the steering box casting has been extended closer to the driver's side inner frame surface. This causes 1/2" bolt, lock washer, and nut at the front drilled hole for attaching the part number 80187 driver's side Push Arm. (The 14744 spacer is too thick to fit between the end of the new stiffening web and the inner surface of the frame.)
- B. We are currently changing the spacer , making it thinner and slightly smaller.
- C. The current spacer can still be used if it is modified slightly by grinding the area that fits between the end of the stiffening web of the steering box casting and the inner surface of the frame 1/8" thinner.
- D. New style spacers will be supplied (1 per 81015 kit) by request when they become available.
