9	20309	4	• Locknut 5/8-11

Reference Form 1-884 for Installation Instructions

SUPER V²

INSTALLATION INSTRUCTIONS:

FIGURE 1

1. Position wing assemblies 1 & 2 face down on cardboard as not to damage the painted surfaces. Grease the bushings on both left and right wings. Position the wings so pivot bushings align. Note: Cutting Edges will be inline at this time.
2. Remove 1/2"-13 x 1" set screw located in top of A-Frame (30) tower. Grease A-Frame (30) bushings and Pivot Pin (19). With a helper, lift the A-Frame (30) and insert its bushings in alignment with the wing bushings.
3. Insert Pivot Pin (19) through bushings. Install and tighten 1/2" x 1.50" bolt (20) and 1/2" lockwasher (21) to top of A-Frame holding Pivot Pin (19) in place. Note: Wipe off any excess grease at this time.
4. Using the A-Frame as leverage tilt the moldboard assembly raising the Cutting Edges off the ground. Support Cutting Edges (12) 5 to 6 inches off the ground.
5. Install the Bottom Belt (15) to left and right wing at Tripedge (3) using 1/2" x 2.75" carriage bolt (18) and locknut (17). Note: Be sure that Belt (15) folds are upward and notches are toward the A-Frame (30). Assemble Backing Plate (16) so bent end is facing the cutting edge forcing the belt against the Tripedge (3). See Figure 3.
6. Using the A-Frame as leverage tilt the moldboard assembly raising the Cutting Edges off the supports. Remove supports and set moldboard assembly to the upright position.
7. Assemble Snow Deflector Brace (26) to Pivot Pin (19). Place brace under the pivot pin plate. Attach using two 5/16" x 1-1/4" bolts (27), 5/16 washers (28) and 5/16 locknuts (29).
8. Position moldboard assembly in the "Vee" position.
9. Assemble Top Snow Deflector (25) positioning the deflector under deflector brace (26). Attach deflector ends under left and right wing gussets using 5/16" x 1-1/4" bolts (27), 5/16 locknuts (29) and 5/16 washers (28). Tighten locknuts such that washers slightly compress the rubber surface.
Note: Snow Deflector Belt should fold/loop downward between brace and each wing gusset when wings are not in the "Vee" position.

See Hydraulic Instructions (Form 1-883) for assembly of Wing Cylinders.

CAUTION: CHECK THE TRIPEDGE ADJUSTMENT AT THIS TIME.

- A. THE SPRINGS ARE PROPERLY ADJUSTED WHEN A PIECE OF PAPER CAN BE PLACED BETWEEN EACH COIL.
- B. IF THE TRIPEDGE SPRINGS NEED ADJUSTMENT, LOOSEN THE BOTTOM NUT (A) ON BOTH SPRING ASSEMBLIES. ROTATE THE TOP LOCKNUT NUT (B) UNTIL THE SPRINGS ARE PROPERLY ADJUSTED.
- C. BE SURE TO TIGHTEN THE BOTTOM NUT (A) SECURELY ON BOTH ASSEMBLIES TO PREVENT LOOSENING OF THE ASSEMBLIES.
