7	63497	1	LINK ARM	10	63356	1	3/4 X 3 SPRING
8	63354	1	3/4 X 6 CLEVIS PIN HEAT-TREATED	11	91911K	1	5/32 X 1-1/2 COTTER PIN KIT
9	91147	1	3/4 FLAT WASHER				
G = GRADE							

⚠ WARNING
 Do not exceed GVWR or GAWR, including blade and ballast. The rating label is found on the driver-side vehicle door cornerpost.

⚠ CAUTION
 Use standard methods and practices when attaching snowplow and installing accessories including proper personal protective safety equipment.

⚠ CAUTION
 Read this document before installing the Conversion Kit.

⚠ CAUTION
 See your WESTERN® outlet/Web site for specific vehicle application recommendations before installation. Conversion Kit weight information may be found in the Selection List.

27170 UltraMount® – UniMount® CONVERSION KIT

Conversion Kit Assembly

⚠ WARNING

Conversion kit use is limited to vehicles up to 19,500 GVWR.

Selection Lists cannot be used to qualify vehicles for use with the conversion kit. To qualify vehicle and determine ballast, you must fill out the Vehicle and Plow Application Inquiry Sheet or use the ballast calculator on Quick Match.

This conversion kit allows a WESTERN® UniMount snowplow assembly to be installed on a vehicle equipped with a

WESTERN UltraMount vehicle mount. This kit can be assembled to allow for six height adjustments to obtain the necessary 9-1/2" to 10-1/2" coupling distance for attaching a WESTERN UniMount snowplow.

Prior to assembling the conversion kit, install Attachment Plate A to the vehicle mount and measure the distance from the top of the attachment plate to the ground as shown in DIAGRAM A ("d" dimension). Bolt the indicated attachment plates to the mount adapter in the appropriate position as shown in DIAGRAM B.

Tighten fasteners to 75 ft-lb.

INSTALLATION INSTRUCTIONS

1. Park the vehicle on a smooth, level, hard surface, such as concrete. Lower the blade to the ground, and turn the control to the "OFF" position. Disconnect the snowplow from the vehicle, or turn the vehicle ignition to the "OFF" position and remove the key.
2. Slide the rear notch of the conversion kit attachment plate over the pin at the rear of the mount. Rotate the front of the attachment plate upward into the mount U-bracket until the holes in the mount line up with the hole through the attachment plate. Insert the 3/4" x 5" clevis pin into the aligned holes of the mount and attachment plate, and insert the hairpin cotter into the hole of the clevis pin (see photo).

Repeat for other side.

NOTE: Additional bumper air dam notching may be required to attach the Conversion Kit.

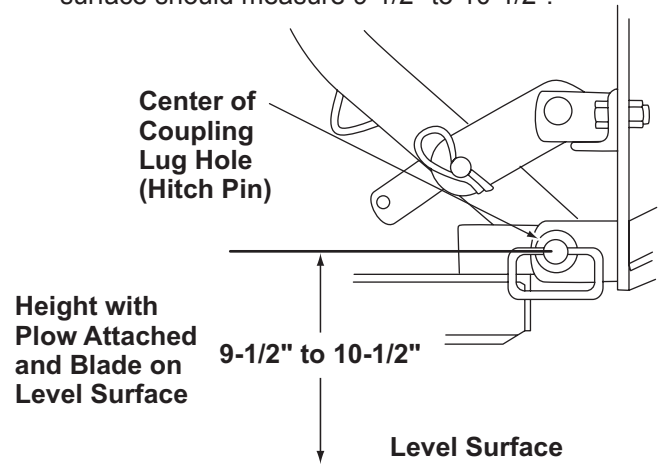

Link Arm Installation

Assemble link arm assembly to mount with one 6" clevis pin, 3" spring, washer and cotter pin. The spring should push the link arm assembly to the outside of the mount.

Coupling Lug Height Check

1. Mount snowplow to vehicle. (See label on back of blade or Owner's Manual for mounting instructions.) Add recommended ballast.
2. With the blade on a level surface, slack in lift chain and rear ballast located behind rear wheels, the center of the coupling holes (hitch pin) to level surface should measure 9-1/2" to 10-1/2".

If 9-1/2" to 10-1/2" distance is not obtained, adjust conversion kit upward or downward to obtain proper distance.

NOTE: Coupling height must be 9-1/2" minimum to allow stand to be pinned to frame.

3. Adjust chain slack with snowplow mounted to vehicle and lift channel pushed all the way down. To adjust, remove chain from hook, straighten chain and pull tight. Rehook it to the lift channel. After chain is hooked, it will have the correct amount of slack for blade "float". DO NOT remove chain from lift channel when removing snowplow from vehicle.
